

The process standards describe ways in which students are expected to engage in the content. The placement of the process standards at the beginning of the knowledge and skills listed for each grade and course is intentional. The process standards weave the other knowledge and skills together so that students may be successful problem solvers and use mathematics efficiently and effectively in daily life. The process standards are integrated at every grade level and course. When possible, students will apply mathematics to problems arising in everyday life, society, and the workplace. Students will use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process and the reasonableness of the solution. Students will select appropriate tools such as real objects, manipulatives, algorithms, paper and pencil, and technology and techniques such as mental math, estimation, number sense, and generalization and abstraction to solve problems. Students will effectively communicate mathematical ideas, reasoning, and their implications using multiple representations such as symbols, diagrams, graphs, computer programs, and language. Students will use mathematical relationships to generate solutions and make connections and predictions. Students will analyze mathematical relationships to connect and communicate mathematical ideas. Students will display, explain, or justify mathematical ideas and arguments using precise mathematical language in written or oral communication.

Unit 1 – Number Relationships August 25 – October 3	
<p><u>Whole Numbers</u></p> <ul style="list-style-type: none"> • Interpret the value of each place-value position as 10 times the position to the right and as one-tenth of the value of the place to its left • Represent the value of the digit in whole numbers through 1,000,000,000 and decimals to the hundredths using expanded notation and numerals • Compare and order whole numbers to 1,000,000,000 and represent comparisons using the symbols $>$, $<$, or $=$ • Round whole numbers to a given place value through the hundred thousands place <p><u>Fractions</u></p> <ul style="list-style-type: none"> • Represent a fraction a/b as a sum of fractions $1/b$, where a and b are whole numbers and $b > 0$, including when $a > b$ • Decompose a fraction in more than one way into a sum of fractions with the same denominator using concrete and pictorial models and recording results with symbolic representations • Determine if two given fractions are equivalent using a variety of methods • Compare two fractions with different numerators and different denominators and represent the comparison using the symbols $>$, $=$, or $<$ • Represent fractions and decimals to the tenths or hundredths as distances from zero on a number line 	<p><u>Decimals</u></p> <ul style="list-style-type: none"> • Represent decimals, including tenths and hundredths, using concrete and visual models and money • Compare and order decimals using concrete and visual models to the hundredth • Relate decimals to fractions that name tenths and hundredths • Determine the corresponding decimal to the tenths or hundredths place of a specified point on a number line

Unit 2 – Number Operations – Addition & Subtraction
October 10 – November 7

Whole Number & Decimal Number
Addition & Subtraction

- **Add and subtract whole numbers and decimals to the hundredths place using the standard algorithm**
- Round to the nearest 10, 100, or 1,000 or use compatible numbers to estimate solutions involving whole numbers (addition and subtraction only at this time)
- **Represent multi-step problems involving the four operations with whole numbers using strip diagrams and equations with a letter standing for the unknown quantity (addition and subtraction only at this time)**
- **Represent problems using an input-output table and numerical expressions to generate a number pattern that follows a given rule representing the relationship of the values in the resulting sequence and their position in the sequence (additive relationships only at this time)**

Perimeter

- Use models to determine the formulas for the perimeter of a rectangle ($l + w + l + w$ or $2l + 2w$), including the special form for perimeter of a square ($4s$)
- **Solve problems related to perimeter of rectangles where dimensions are whole numbers**

Addition & Subtraction with Fractions

- **Represent and solve addition and subtraction of fractions with equal denominators using objects and pictorial models that build to the number line and properties of operations**
- Evaluate the reasonableness of sums and differences of fractions using benchmark fractions 0, $\frac{1}{4}$, $\frac{1}{2}$, $\frac{3}{4}$, and 1, referring to the same whole

**Unit 3 – Number & Operations – Multiplication & Division,
Measurement Applications, & Algebraic Reasoning
November 10 – December 12
January 12 – February 20**

Multiplication & Division

- Determine products of a number and 10 or 100 using properties of operations and place value understandings
- Represent the product of 2 two-digit numbers using arrays, area models, or equations, including perfect squares through 15 by 15
- Use strategies and algorithms, including the standard algorithm, to multiply up to a four-digit number by a one-digit number and to multiply a two-digit number by a two-digit number (strategies may include mental math, partial products, and the commutative, associative, and distributive properties)
- Represent the quotient of up to a four-digit whole number divided by a one-digit whole number using arrays, area models, or equations
- Use strategies and algorithms, including the standard algorithm, to divide up to a four-digit dividend by a one-digit divisor
- Round to the nearest 10, 100, or 1,000 or use compatible numbers to estimate solutions involving whole numbers
- **Solve with fluency one- and two-step problems involving multiplication and division, including interpreting remainders**

Area

- Use models to determine the formulas for the perimeter of a rectangle ($l + w + l + w$ or $2l + 2w$), including the special form for perimeter of a square ($4s$) and the area of a rectangle ($l \times w$)
- **Solve problems related to perimeter and area of rectangles where dimensions are whole numbers**

Algebraic Reasoning

- **Represent multi-step problems involving the four operations with whole numbers using strip diagrams and equations with a letter standing for the unknown quantity**
- **Represent problems using an input-output table and numerical expressions to generate a number pattern that follows a given rule representing the relationship of the values in the resulting sequence and their position in the sequence**

Measurement Applications

- Identify relative sizes of measurement units within the customary and metric systems
- Convert measurements within the same measurement system, customary or metric, from a smaller unit into a larger unit or a larger unit into a smaller unit when given other equivalent measures represented in a table
- **Solve problems that deal with measurements of length, intervals of time, liquid volumes, mass, and money using addition, subtraction, multiplication, or division as appropriate**

Unit 4 – Financial Literacy

December 15 – January 9

Financial Literacy

- Distinguish between fixed and variable expenses
- Calculate profit in a given situation
- Compare the advantages and disadvantages of various savings options
- Describe how to allocate a weekly allowance among spending; saving, including for college; and sharing
- Describe the basic purpose of financial institutions, including keeping money safe, borrowing money, and lending

Unit 5 – Geometry & Measurement

February 23 – March 13

Geometry

- Identify points, lines, line segments, rays, angles, and perpendicular and parallel lines
- Identify and draw one or more lines of symmetry, if they exist, for a two-dimensional figure
- Apply knowledge of right angles to identify acute, right, and obtuse triangles
- **Classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines or the presence or absence of angles of a specified size**

Measurement

- Illustrate the measure of an angle as the part of a circle whose center is at the vertex of the angle that is "cut out" by the rays of the angle (angle measures are limited to whole numbers)
- Illustrate degrees as the units used to measure an angle, where $1/360$ of any circle is one degree and an angle that "cuts" $n/360$ out of any circle whose center is at the angle's vertex has a measure of n degrees. Angle measures are limited to whole numbers
- **Determine the approximate measures of angles in degrees to the nearest whole number using a protractor**
- Draw an angle with a given measure
- Determine the measure of an unknown angle formed by two non-overlapping adjacent angles given one or both angle measures

Unit 6 – Data Analysis

March 23 – April 3

Data Analysis

- **Represent data on a frequency table, dot plot, or stem-and-leaf plot marked with whole numbers and fractions**
- Solve one- and two-step problems using data in whole number, decimal, and fraction form in a frequency table, dot plot, or stem-and-leaf plot

**STAAR Prep and Assessment
April 6 – April 24**

**Unit 7 – Solidifying 4th Grade
April 27 – June 5**
