

The process standards describe ways in which students are expected to engage in the content. The placement of the process standards at the beginning of the knowledge and skills listed for each grade and course is intentional. The process standards weave the other knowledge and skills together so that students may be successful problem solvers and use mathematics efficiently and effectively in daily life. The process standards are integrated at every grade level and course. When possible, students will apply mathematics to problems arising in everyday life, society, and the workplace. Students will use a problem-solving model that incorporates analyzing given information, formulating a plan or strategy, determining a solution, justifying the solution, and evaluating the problem-solving process and the reasonableness of the solution. Students will select appropriate tools such as real objects, manipulatives, algorithms, paper and pencil, and technology and techniques such as mental math, estimation, number sense, and generalization and abstraction to solve problems. Students will effectively communicate mathematical ideas, reasoning, and their implications using multiple representations such as symbols, diagrams, graphs, computer programs, and language. Students will use mathematical relationships to generate solutions and make connections and predictions. Students will analyze mathematical relationships to connect and communicate mathematical ideas. Students will display, explain, or justify mathematical ideas and arguments using precise mathematical language in written or oral communication.

**Unit 1 – Financial Literacy**  
**August 25-29 & the all year**

**Financial Literacy**

- Calculate how money saved can accumulate into a larger amount over time
- Explain that saving is an alternative to spending
- Distinguish between a deposit and a withdrawal
- Identify examples of borrowing and distinguish between responsible and irresponsible borrowing
- Identify examples of lending and use concepts of benefits and costs to evaluate lending decisions

**Unit 2 – Interpreting & Symbolizing Addition and Subtraction**  
**September 5-26**

**Addition & Subtraction**

- Recall basic facts to add and subtract within 20 with automaticity
- Represent and solve addition and subtraction word problems where unknowns may be any one of the terms in the problem

**Financial Literacy**

- Calculate how money saved can accumulate into a larger amount over time
- Explain that saving is an alternative to spending
- Distinguish between a deposit and a withdrawal
- Identify examples of borrowing and distinguish between responsible and irresponsible borrowing
- Identify examples of lending and use concepts of benefits and costs to evaluate lending decisions

**Unit 3 – Place Value to 1200**  
**September 29 – November 21**

**Place Value to 1,200**

- Use concrete and pictorial models to compose and decompose numbers up to 1,200 in more than one way as a sum of so many thousands, hundreds, tens, and ones
- Use standard, word, and expanded forms to represent numbers up to 1,200
- Generate a number that is greater than or less than a given whole number up to 1,200
- Use place value to compare and order whole numbers up to 1,200 using comparative language, numbers, and symbols (>, <, or =)
- Locate the position of a given whole number on an open number line
- Name the whole number that corresponds to a specific point on a number line
- Use an understanding of place value to determine the number that is 10 or 100 more or less than a given number up to 1,200

**Financial Literacy**

- Calculate how money saved can accumulate into a larger amount over time
- Explain that saving is an alternative to spending
- Distinguish between a deposit and a withdrawal
- Identify examples of borrowing and distinguish between responsible and irresponsible borrowing
- Identify examples of lending and use concepts of benefits and costs to evaluate lending decisions

**Unit 4 – Measurement – Length, Area, & Time**  
**December 1 – January 9**

**Measurement**

- Find the length of objects using concrete models for standard units of length
- Describe the inverse relationship between the size of the unit and the number of units needed to equal the length of an object
- Represent whole numbers as distances from any given location on a number line
- Determine the length of an object to the nearest marked unit using rulers, yardsticks, meter sticks, or measuring tapes
- Determine a solution to a problem involving length, including estimating lengths

- Use concrete models of square units to find the area of a rectangle by covering it with no gaps or overlaps, counting to find the total number of square units, and describing the measurement using a number and the unit
- Read and write time to the nearest one-minute increment using analog and digital clocks and distinguish between a.m. and p.m.

**Financial Literacy**

- Calculate how money saved can accumulate into a larger amount over time
- Explain that saving is an alternative to spending
- Distinguish between a deposit and a withdrawal
- Identify examples of borrowing and distinguish between responsible and irresponsible borrowing
- Identify examples of lending and use concepts of benefits and costs to evaluate lending decisions

**Unit 5 – Addition & Subtraction within 1,000 and Graphing**  
**January 12 – March 13**

**Addition & Subtraction**

- Add up to four two-digit numbers and subtract two-digit numbers using mental strategies and algorithms based on knowledge of place value and properties of operations
- Solve one-step and multi-step word problems involving addition and subtraction within 1,000 using a variety of strategies based on place value, including algorithms
- Generate and solve problem situations for a given mathematical number sentence involving addition and subtraction of whole numbers within 1,000
- Determine the value of a collection of coins up to one dollar
- Use the cent symbol, dollar sign, and the decimal point to name the value of a collection of coins
- Represent and solve addition and subtraction word problems where unknowns may be any one of the terms in the problem

**Graphing**

- Explain that the length of a bar in a bar graph or the number of pictures in a pictograph represents the number of data points for a given category
- Organize a collection of data with up to four categories using pictographs and bar graphs with intervals of one or more
- Write and solve one-step word problems involving addition or subtraction using data represented within pictographs and bar graphs with intervals of one
- Draw conclusions and make predictions from information in a graph

**Financial Literacy**

- Calculate how money saved can accumulate into a larger amount over time
- Explain that saving is an alternative to spending
- Distinguish between a deposit and a withdrawal
- Identify examples of borrowing and distinguish between responsible and irresponsible borrowing
- Identify examples of lending and use concepts of benefits and costs to evaluate lending decisions

**Unit 6 – Geometry & Fractions**  
**March 23 – April 24**

**Geometry**

- Create two-dimensional shapes based on given attributes, including number of sides and vertices
- Classify and sort three-dimensional solids, including spheres, cones, cylinders, rectangular prisms (including cubes as special rectangular prisms), and triangular prisms, based on attributes using formal geometric language
- Classify and sort polygons with 12 or fewer sides according to attributes, including identifying the number of sides and number of vertices
- Compose two-dimensional shapes and three-dimensional solids with given properties or attributes
- Decompose two-dimensional shapes such as cutting out a square from a rectangle, dividing a shape in half, or partitioning a rectangle into identical triangles and identify the resulting geometric parts

**Fractions**

- Partition objects into equal parts and name the parts, including halves, fourths, and eighths, using words
- Explain that the more fractional parts used to make a whole, the smaller the part; and the fewer the fractional parts, the larger the part
- Use concrete models to count fractional parts beyond one whole using words and recognize how many parts it takes to equal one whole
- Identify examples and non-examples of halves, fourths, and eighths

**Financial Literacy**

- Calculate how money saved can accumulate into a larger amount over time
- Explain that saving is an alternative to spending
- Distinguish between a deposit and a withdrawal
- Identify examples of borrowing and distinguish between responsible and irresponsible borrowing
- Identify examples of lending and use concepts of benefits and costs to evaluate lending decisions

**Unit 7 – Multiplication & Division**  
**April 27 – June 5**

**Multiplication**

- Model, create, and describe contextual multiplication situations in which equivalent sets of concrete objects are joined

**Division**

- Model, create, and describe contextual division situations in which a set of concrete objects is separated into equivalent sets
- Determine whether a number up to 40 is even or odd using pairings of objects to represent the number

**Financial Literacy**

- Calculate how money saved can accumulate into a larger amount over time
- Explain that saving is an alternative to spending
- Distinguish between a deposit and a withdrawal
- Identify examples of borrowing and distinguish between responsible and irresponsible borrowing
- Identify examples of lending and use concepts of benefits and costs to evaluate lending decisions
